CAMBRIDGE INTERNATIONAL EXAMINATIONS

Cambridge International Advanced Subsidiary Level

MARK SCHEME for the October/November 2015 series

9709 MATHEMATICS

9709/21 Paper 2, maximum raw mark 50

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2015 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

® IGCSE is the registered trademark of Cambridge International Examinations.

Mark Scheme Notes

Marks are of the following three types:

- M Method mark, awarded for a valid method applied to the problem. Method marks are not lost for numerical errors, algebraic slips or errors in units. However, it is not usually sufficient for a candidate just to indicate an intention of using some method or just to quote a formula; the formula or idea must be applied to the specific problem in hand, e.g. by substituting the relevant quantities into the formula. Correct application of a formula without the formula being quoted obviously earns the M mark and in some cases an M mark can be implied from a correct answer.
- A Accuracy mark, awarded for a correct answer or intermediate step correctly obtained. Accuracy marks cannot be given unless the associated method mark is earned (or implied).
- B Mark for a correct result or statement independent of method marks.
- When a part of a question has two or more "method" steps, the M marks are generally independent unless the scheme specifically says otherwise; and similarly when there are several B marks allocated. The notation DM or DB (or dep*) is used to indicate that a particular M or B mark is dependent on an earlier M or B (asterisked) mark in the scheme. When two or more steps are run together by the candidate, the earlier marks are implied and full credit is given.
- The symbol
 [↑] implies that the A or B mark indicated is allowed for work correctly following
 on from previously incorrect results. Otherwise, A or B marks are given for correct work only.
 A and B marks are not given for fortuitously "correct" answers or results obtained from
 incorrect working.
- Note: B2 or A2 means that the candidate can earn 2 or 0.
 B2/1/0 means that the candidate can earn anything from 0 to 2.

The marks indicated in the scheme may not be subdivided. If there is genuine doubt whether a candidate has earned a mark, allow the candidate the benefit of the doubt. Unless otherwise indicated, marks once gained cannot subsequently be lost, e.g. wrong working following a correct form of answer is ignored.

- Wrong or missing units in an answer should not lead to the loss of a mark unless the scheme specifically indicates otherwise.
- For a numerical answer, allow the A or B mark if a value is obtained which is correct to 3 s.f., or which would be correct to 3 s.f. if rounded (1 d.p. in the case of an angle). As stated above, an A or B mark is not given if a correct numerical answer arises fortuitously from incorrect working. For Mechanics questions, allow A or B marks for correct answers which arise from taking *g* equal to 9.8 or 9.81 instead of 10.

	Cambridge International AS Level – October/November 2015	9709	21

The following abbreviations may be used in a mark scheme or used on the scripts:

AEF	Any Equivalent Form (of answer is equally acceptable)
AG	Answer Given on the question paper (so extra checking is needed to ensure that the detailed working leading to the result is valid)
BOD	Benefit of Doubt (allowed when the validity of a solution may not be absolutely clear)
CAO	Correct Answer Only (emphasising that no "follow through" from a previous error is allowed)
CWO	Correct Working Only – often written by a 'fortuitous' answer
ISW	Ignore Subsequent Working
MR	Misread
PA	Premature Approximation (resulting in basically correct work that is insufficiently accurate)
sos	See Other Solution (the candidate makes a better attempt at the same question)
SR	Special Ruling (detailing the mark to be given for a specific wrong solution, or a case where some standard marking practice is to be varied in the light of a particular circumstance)

Penalties

- MR –1 A penalty of MR –1 is deducted from A or B marks when the data of a question or part question are genuinely misread and the object and difficulty of the question remain unaltered. In this case all A and B marks then become "follow through "" marks. MR is not applied when the candidate misreads his own figures this is regarded as an error in accuracy. An MR–2 penalty may be applied in particular cases if agreed at the coordination meeting.
- PA –1 This is deducted from A or B marks in the case of premature approximation. The PA –1 penalty is usually discussed at the meeting.

		Cambridge International AS Level – October/November 2015	9709	21	
1		oduce logarithms and use power law twice		M1*	
		ain $(x+3)\log 5 = (x-1)\log 7$ or equivalent	A		
		ve linear equation for x	M	1 dep	F 43
	Obt	ain 20.1		A1	[4]
_	**				
2	Use	quotient rule or, after adjustment, product rule		M1*	
	Obt	ain $\frac{3x-15-3x-1}{(x-5)^2}$ or equivalent		A1	
		ate first derivative to -4 and solve for x	M	1 dep	
		ain x-coordinates 3 and 7 or one correct pair of coordinates		A1	Γ 5]
	Obt	ain y-coordinates –5 and 11 respectively or other correct pair of coordinates		A1	[5]
3	(i)	State or imply $R = 17$		B 1	
	()	Use appropriate formula to find α		M1	
		Obtain 61.93		A1	[3]
	(ii)	Attempt to find at least one value of $\theta + \alpha$		M1	
	()	Obtain one correct value of θ (97.4 or 318.7)		A1	
		Carry out correct method to find second answer		M1	
		Obtain second correct value and no others between 0 and 360		A1	[4]
4	(i)	Make a recognisable sketch of $y = \ln x$		B 1	
	()	Draw straight line with negative gradient crossing positive y-axis and justify			
		one real root		B 1	[2]
	(ii)	Consider sign of $\ln x + \frac{1}{2}x - 4$ at 4.5 and 5.0 or equivalent		M1	
	()	_			503
		Complete the argument correctly with appropriate calculations		A1	[2]
	(iii)	Use the iterative formula correctly at least once		M 1	
	()	Obtain final answer 4.84		A1	
		Show sufficient iterations to justify accuracy to 2 d.p. or show sign change			
		in interval (4.835, 4.845)		A1	[3]
5	(a)	Use $\tan^2 x = \sec^2 x - 1$		B1	
3	(a)	Obtain integral of form $p \tan x + qx + r \cos 2x$		M1	
				1711	
		Obtain $\tan x - x - \frac{1}{2}\cos 2x + c$		A1	[3]

	Cambridge International AS Level – October/November 2015	9709	21

- (b) Obtain integral of form ke^{1-2x} M1*

 Obtain $-\frac{3}{2}e^{1-2x}$ A1

 Apply both limits the correct way round

 Obtain $-\frac{3}{2}e^{-1} + \frac{3}{2}e$ or exact equivalent

 A1 [4]
- 6 (i) Carry out division at least as far as quotient $x^2 + kx$ M1

 Obtain partial quotient $x^2 + 2x$ A1

 Obtain quotient $x^2 + 2x + 1$ with no errors seen

 Obtain remainder 5x + 2 A1 [4]
 - (ii) Either Carry out calculation involving 12x + 6 and their remainder ax + b M1
 Obtain p = 7, q = 4 A1
 Or Multiply $x^2 x + 4$ by their three-term quadratic quotient Obtain p = 7, q = 4 A1
 [2]
 - (iii) Show that discriminant of $x^2 x + 4$ is negative B1 Form equation $(x^2 - x + 4)(x^2 + 2x + 1) = 0$ and attempt solution M1 Show that $x^2 + 2x + 1 = 0$ gives one root x = -1 A1 [3]
- 7 (i) Obtain $12 \sin t \cos t$ or equivalent for $\frac{dx}{dt}$ Obtain $4 \cos 2t 6 \sin 2t$ or equivalent for $\frac{dy}{dt}$ B1

 Obtain expression for $\frac{dy}{dx}$ in terms of tUse $2 \sin t \cos t = \sin 2t$ Confirm given answer $\frac{dy}{dx} = \frac{2}{3} \cot 2t 1$ with no errors seen

 A1 [5]
 - (ii) State or imply $\tan 2t = \frac{2}{3}$ Obtain t = 0.294Obtain t = 1.865B1

 [3]
 - (iii) Attempt solution of $2 \sin 2t + 3 \cos 2t = 0$ at least as far as $\tan 2t = ...$ M1

 Obtain $\tan 2t = -\frac{3}{2}$ or equivalent

 Substitute to obtain $-\frac{13}{9}$ A1 [3]
