MATHEMATICS						9709/42
Paper 4 Mecha	nics 1 (M1)	)		0	ctober/Nov	ember 2019
					1 hour	15 minutes
Candidates ansv	wer on the	Question Pa	iper.			
Additional Mater	ials: Li	st of Formu	lae (MF9)			

### **READ THESE INSTRUCTIONS FIRST**

Write your centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** the questions in the space provided. If additional space is required, you should use the lined page at the end of this booklet. The question number(s) must be clearly shown.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

Where a numerical value for the acceleration due to gravity is needed, use  $10 \text{ m s}^{-2}$ .

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

The total number of marks for this paper is 50.

This document consists of 13 printed pages and 3 blank pages.

## **BLANK PAGE**

A particle moves in a straight line. The displacement of the particle at time t s is s m, where

1

$s = t^3 - 6t^2 + 4t.$
Find the velocity of the particle at the instant when its acceleration is zero. [4]

© UCLES 2019 9709/42/O/N/19 **[Turn over** 

2

The diagram shows a velocity-time graph which models the motion of a tractor. The graph consists of four straight line segments. The tractor passes a point O at time t=0 with speed  $U \, \mathrm{m \, s}^{-1}$ . The tractor accelerates to a speed of  $V \, \mathrm{m \, s}^{-1}$  over a period of 5 s, and then travels at this speed for a further 25 s. The tractor then accelerates to a speed of  $12 \, \mathrm{m \, s}^{-1}$  over a period of 5 s. The tractor then decelerates to rest over a period of 15 s.

(1)	of $V$ . [2]
(ii)	Given also that the total distance covered by the tractor in the 50 seconds of motion is $375  \text{m}$ , find the value of $U$ . [3]

A particle $P$ of mass 0.3 kg is held in equilibrium above a horizontal plane by a force of magnitude 5 N, acting vertically upwards. The particle is attached to two strings $PA$ and $PB$ of lengths 0.9 m and 1.2 m respectively. The points $A$ and $B$ lie on the plane and angle $APB = 90^{\circ}$ (see diagram). Find the tension in each of the strings.				

A lorry of mass  $25\,000\,\mathrm{kg}$  travels along a straight horizontal road. There is a constant force of  $3000\,\mathrm{N}$ 

Find the power required to maintain a constant speed of 30 m s <sup>-1</sup>	
lorry comes to a straight hill inclined at $2^{\circ}$ to the horizontal. The elorry at the point $A$ which is at the foot of the hill. Point $B$ is full	rther up the hill. The spo
lorry comes to a straight hill inclined at $2^{\circ}$ to the horizontal. The elorry at the point $A$ which is at the foot of the hill. Point $B$ is further, and $B$ are $30 \mathrm{ms^{-1}}$ and $25 \mathrm{ms^{-1}}$ respectively. The resistance of $B$ above the level of $A$	rther up the hill. The speance force is still 3000 N

i)	When the block has moved a distance of 4.5 m, the force of magnitude 6 N is removed and the block then decelerates to rest. Find the total time for which the block is in motion.

Two particles P and Q, of masses 0.3 kg and 0.2 kg respectively, are attached to the ends of a light inextensible string. The string passes over a fixed smooth pulley which is attached to the edge of a smooth plane. The plane is inclined at an angle  $\theta$  to the horizontal, where  $\sin \theta = \frac{3}{5}$ . P lies on the plane and Q hangs vertically below the pulley at a height of 0.8 m above the floor (see diagram). The string between P and the pulley is parallel to a line of greatest slope of the plane. P is released from rest and Q moves vertically downwards.

)	Find the tension in the string and the magnitude of the acceleration of the particles.	[5]
		•••••

Q hits the floor and does not bounce. It is given that P does not reach the pulley in the subsequent

mot	ion.
(ii)	Find the time, from the instant at which $P$ is released, for $Q$ to reach the floor. [2]
(iii)	When $Q$ hits the floor the string becomes slack. Find the time, from the instant at which $P$ is released, for the string to become taut again. [4]

# **Additional Page**

If you use the following lined page to complete the answer(s) to any question(s), the question number(s) must be clearly shown.
